# Software-defined Network with Ravel

Lecture by Fangping Lan
PhD student in Prof. Anduo Wang's group

### Prerequisites

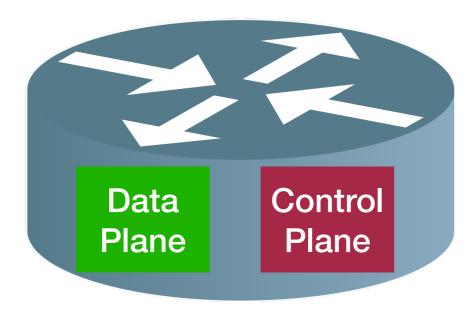

- PostgreSQL Database
- SQL Language
  - updates, views, triggers, rules, etc.
- Mininet

### **Our Goals**

- What's Software-defined network(SDN)?
- Principles and features of Ravel
- Architecture of Ravel
- Ravel examples

### **Control Plane and Data Plane**

#### Network paradigm:

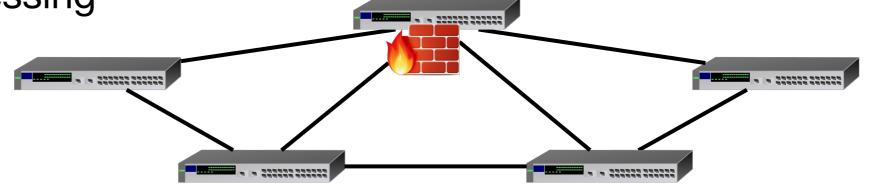

Data plane and control plane resides within the physical device

- Forwarding: Data plane
  - Directing a data packet to an out-going link
  - Individual router using a forwarding table
- Routing: Control plane
  - Computing paths the packets will follow
  - Individual router creating a forwarding table

### Management Plane Challenges

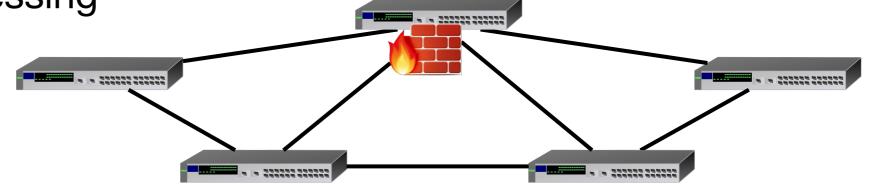

- Indirect control
  - change weight instead of paths
  - complex optimization problem
- Uncoordinated control
  - cannot control which router updates first
- Interacting protocols and mechanisms
  - Routing and forwarding
  - Naming and addressing
  - Access control
  - Quality of service
  - •

### Management Plane Challenges

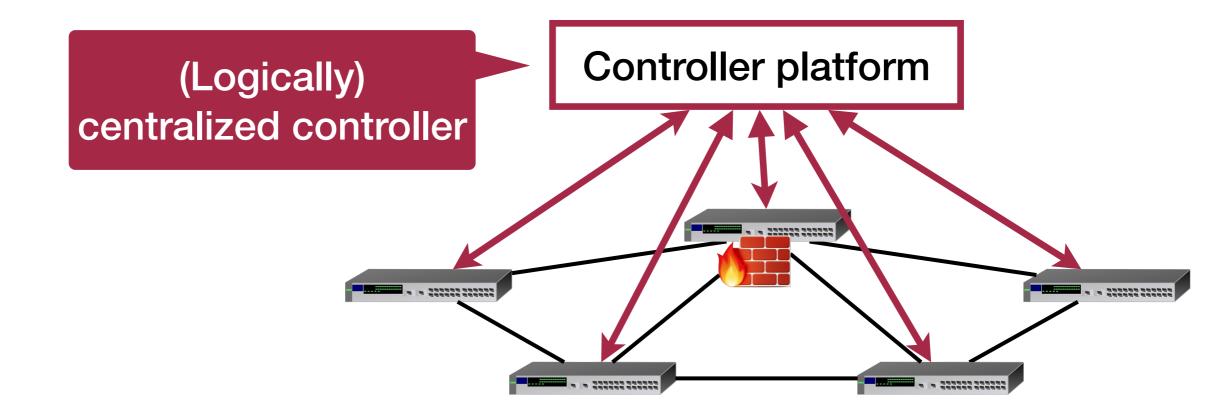

- Indirect control
  - change weight instead of paths
  - complex optimization problem
- Uncoordinated control
  - cannot control which router updates first
- Interacting protocols and mechanisms
  - Routing and forwarding
  - Naming and addressing
  - Access control
  - Quality of service

•

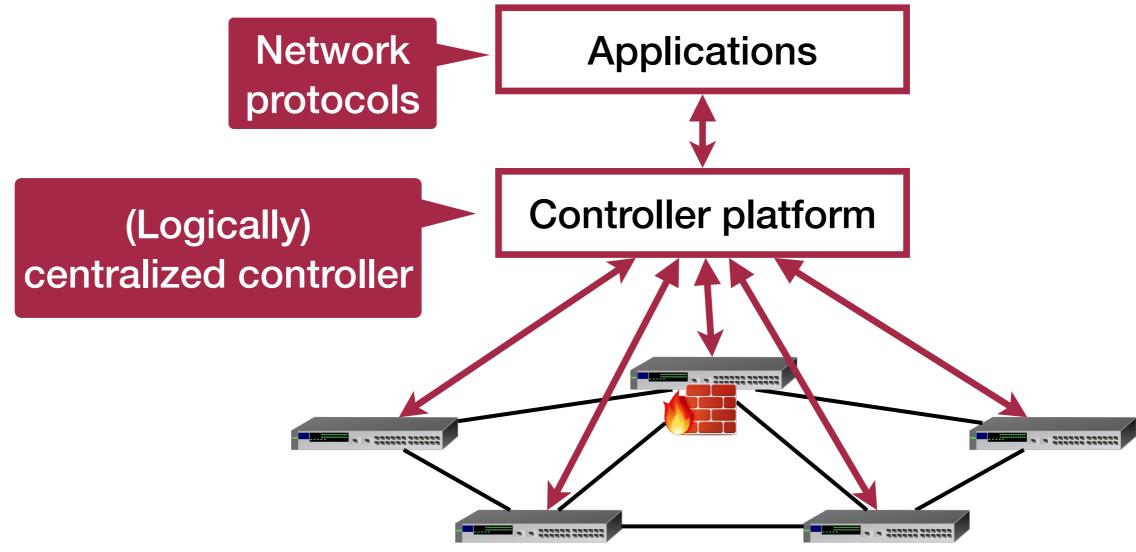

Software-defined network is to simplify management plane

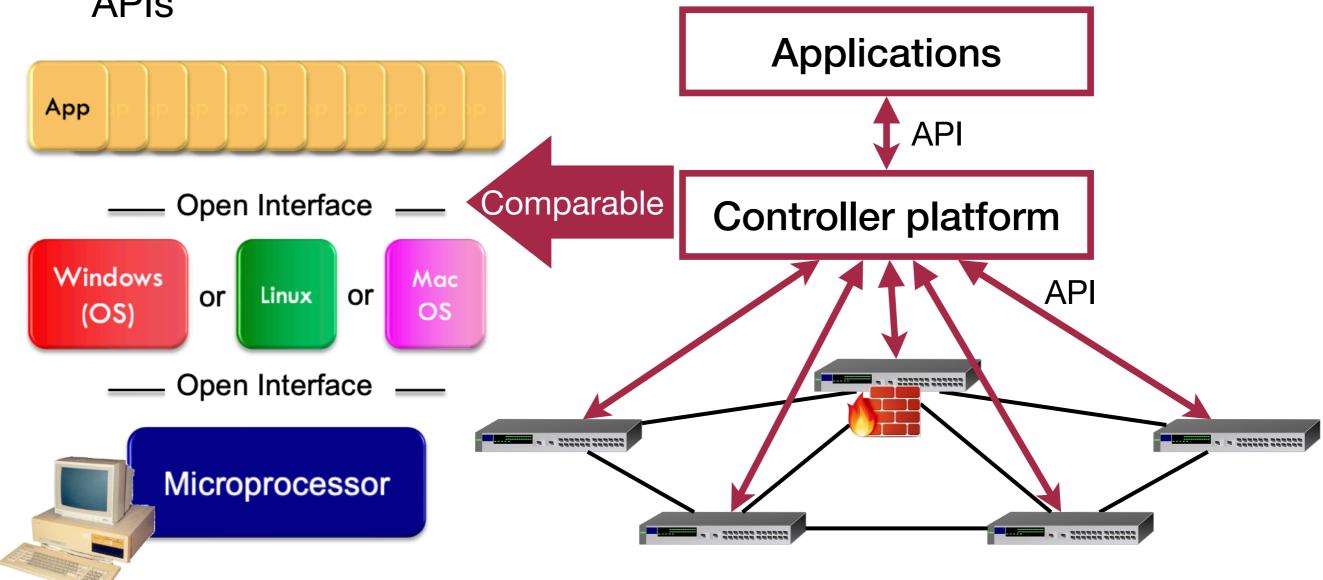

Decouple control and data planes by providing open standard API

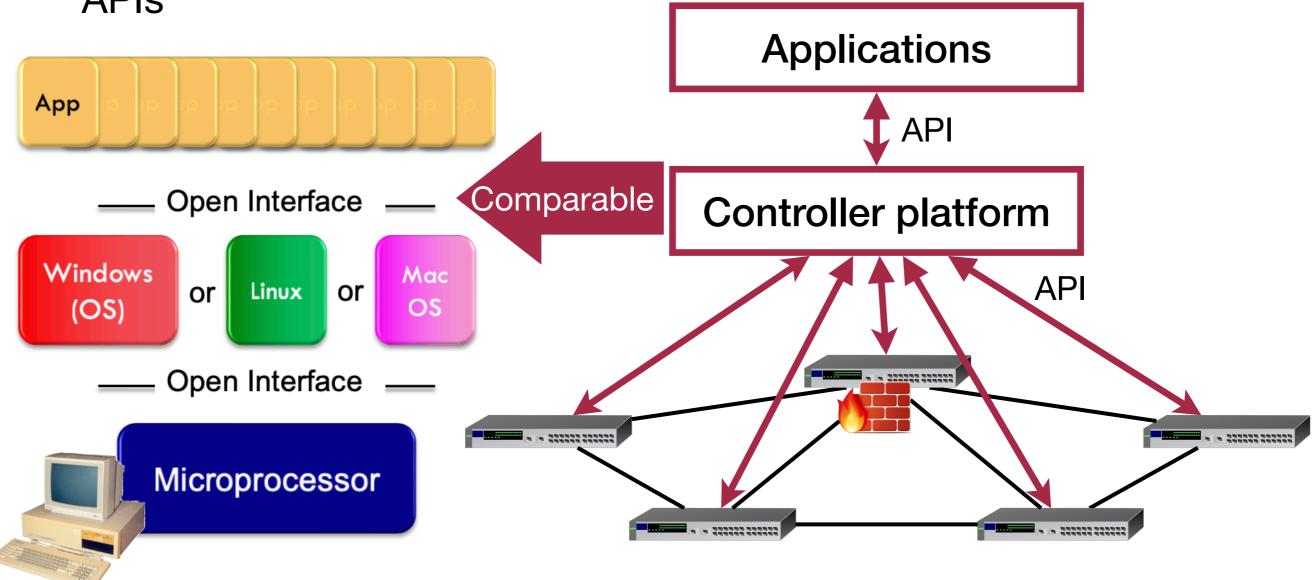

Decouple control and data planes by providing open standard API

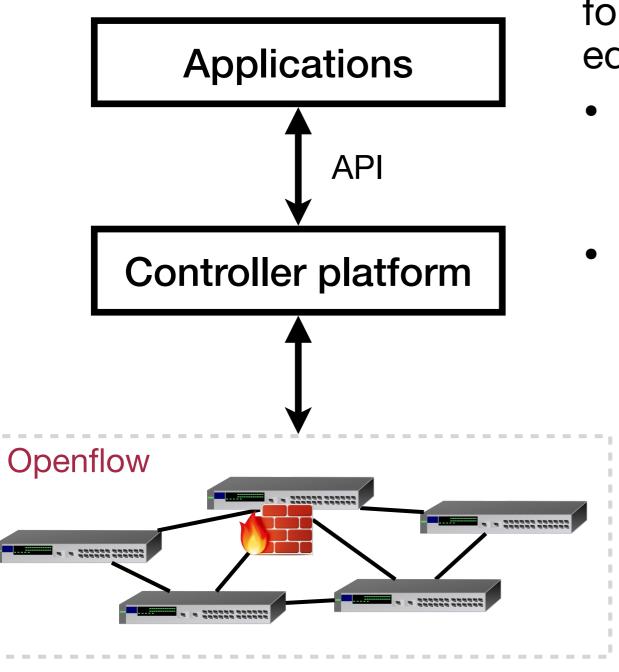

Decouple control and data planes by providing open standard APIs

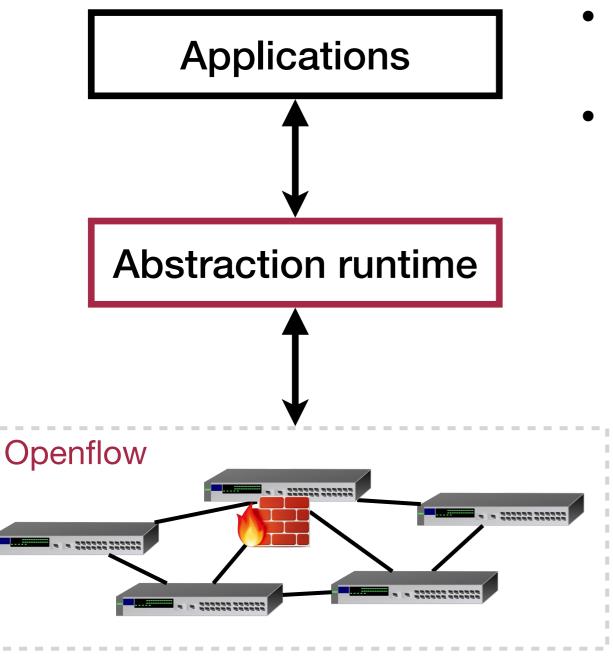

Decouple control and data planes by providing open standard APIs

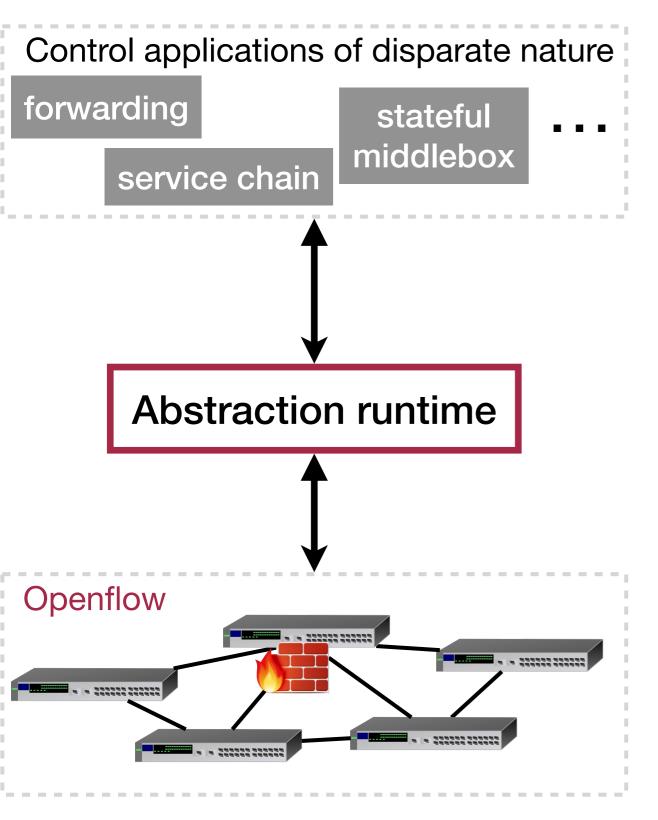

Software-defined network is an approach to building computer networks that separates and abstracts elements of networks

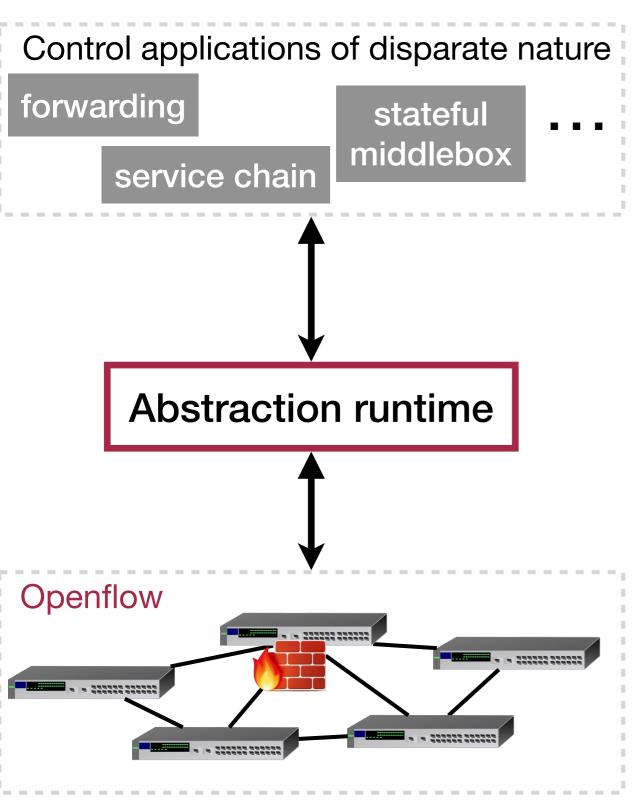

- Openflow is a multivendor standard defined by Open Network Foundations for implementing SDN in networking equipments
  - defines the communication between an SDN controller and network equipments.
  - to packet forwarding

- Programming abstractions are crucial for the vision of SDN
  - high-level abstractions to make programming easy
  - what are "right" abstractions?

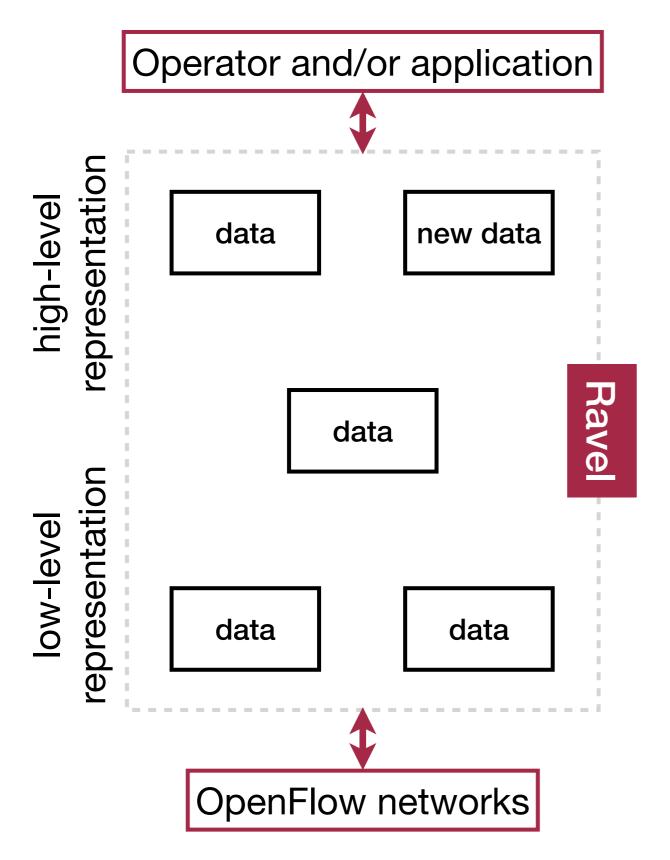

# **Network Keeps Evolving**

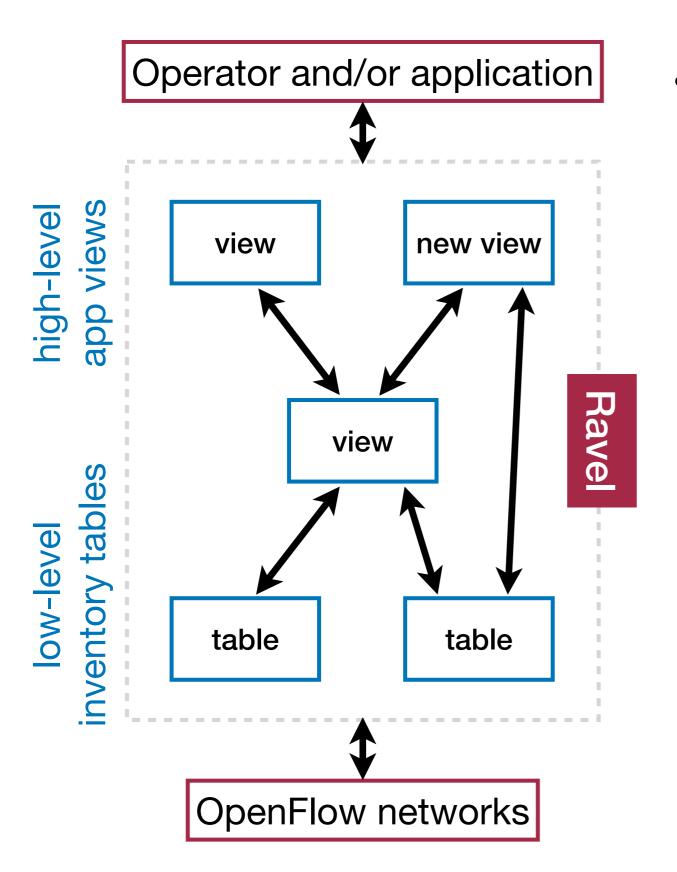

- New/changing requirements for abstractions
- Abstraction runtime needs reengineering
- Orchestrate controls across abstractions

### Ravel's Perspective

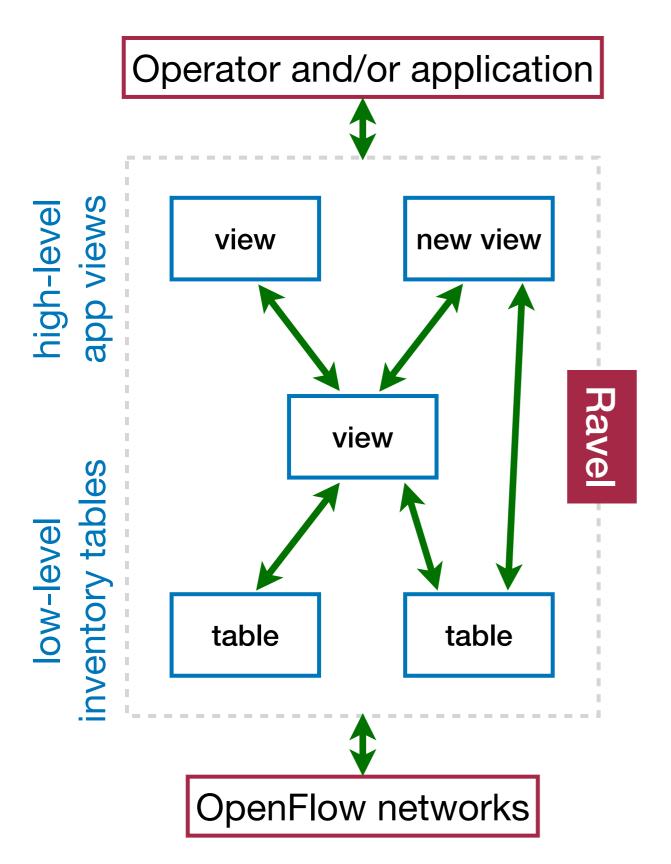

- SDN control revolves around data representation
- adopt a plain data representation
- use a universal data language

### A Database-defined Network

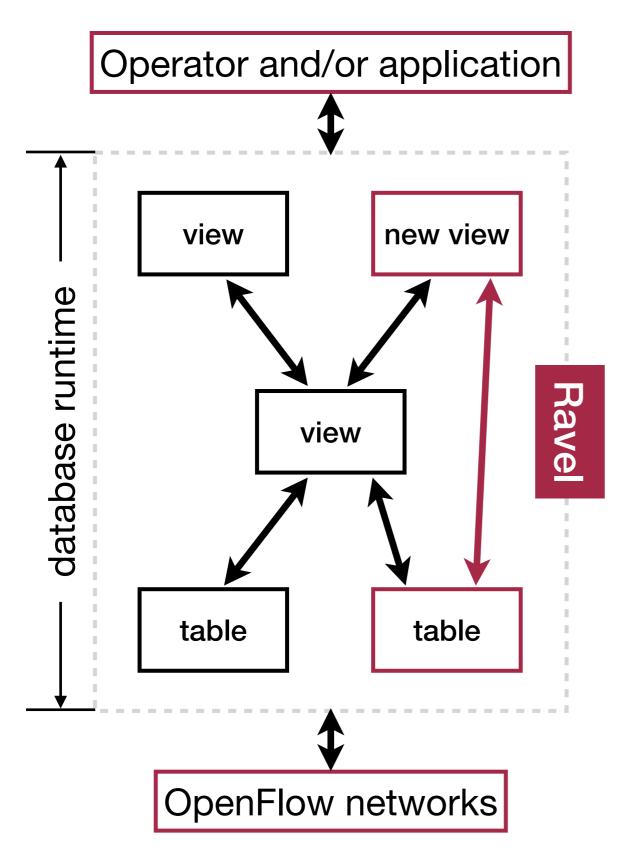

- Relation the plain data representation
  - Table stored relation
  - View virtual relation

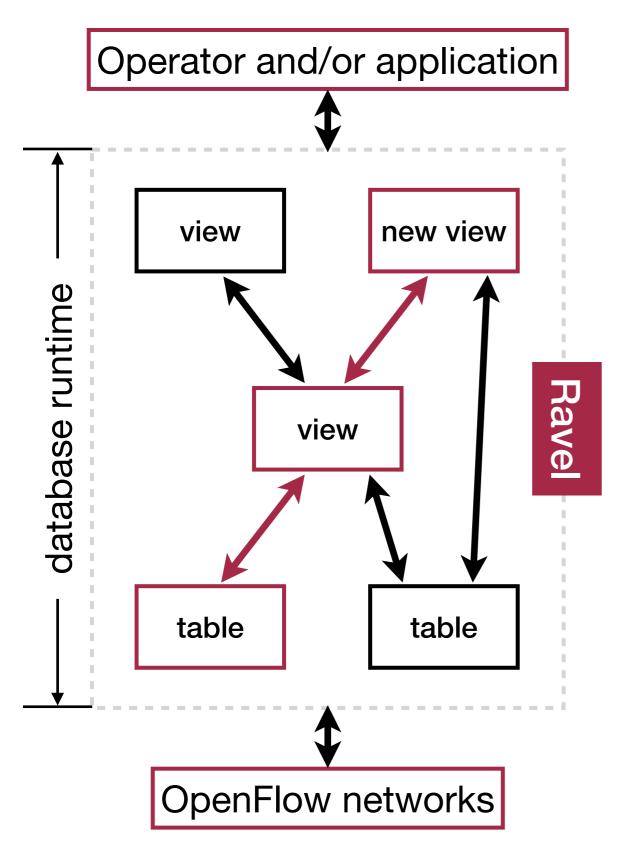

### A Database-defined Network

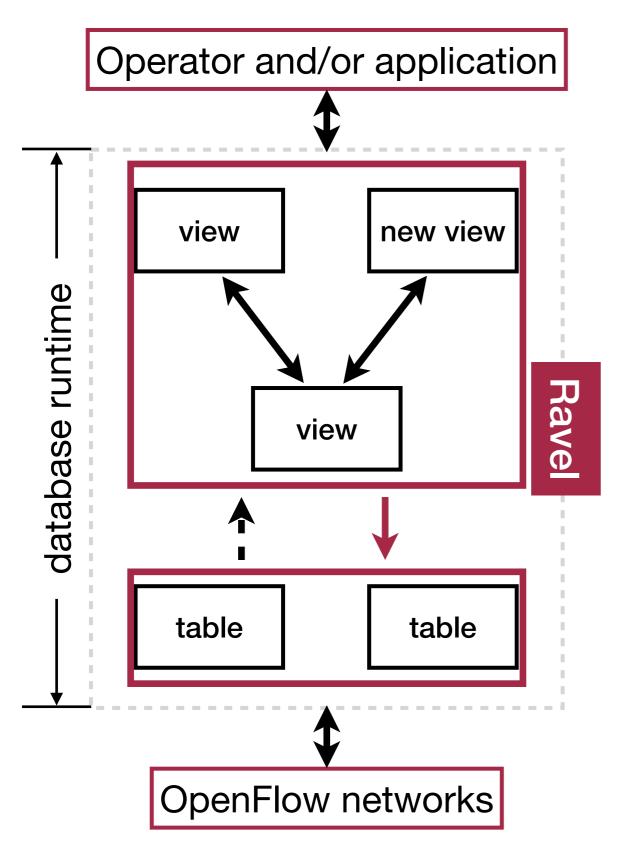

- Relation the plain data representation
  - Table stored relation
  - View virtual relation
- SQL the universal language
  - Query, update, trigger, rule

 Ad-hoc programmable abstraction via views

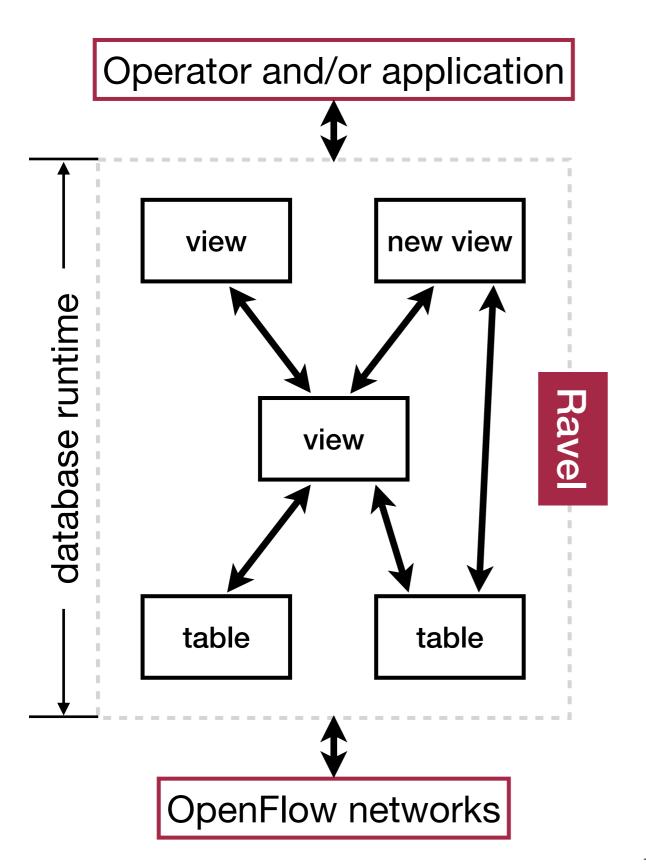

- Ad-hoc programmable abstraction via views
- Orchestration across abstractions via view mechanism

- Ad-hoc programmable abstraction via views
- Orchestration across abstractions via view mechanism
- Orchestration across applications via data mediation

- Ad-hoc programmable abstraction via views
- Orchestration across abstractions via view mechanism
- Orchestration across applications via data mediation
- Network control via SQL

- Attractive features:
  - Abstraction
  - Orchestration
  - SQL

### **Abstraction: Network Tables**

#### Reachability Matrix

fid	src	dst	vol	
1	h <sub>1</sub>	h <sub>4</sub>	5	
2	h <sub>2</sub>	h <sub>3</sub>	9	

. . .

#### Topology

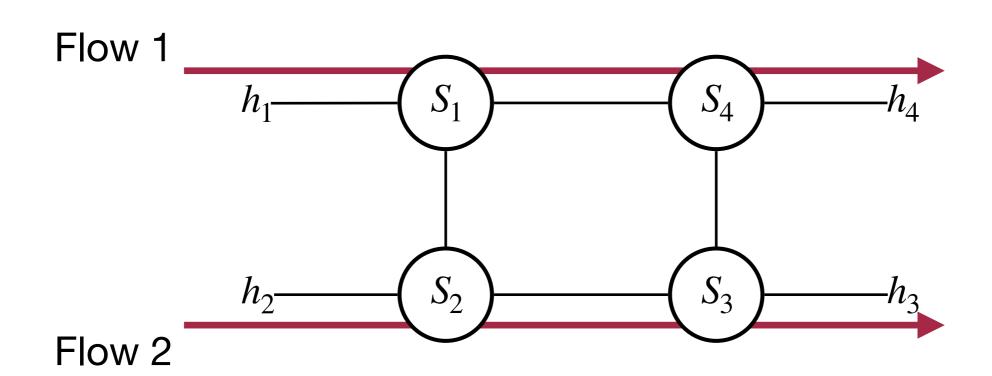

sid	nid
S <sub>1</sub>	S <sub>2</sub>
S <sub>1</sub>	S <sub>4</sub>
S <sub>1</sub>	h <sub>1</sub>

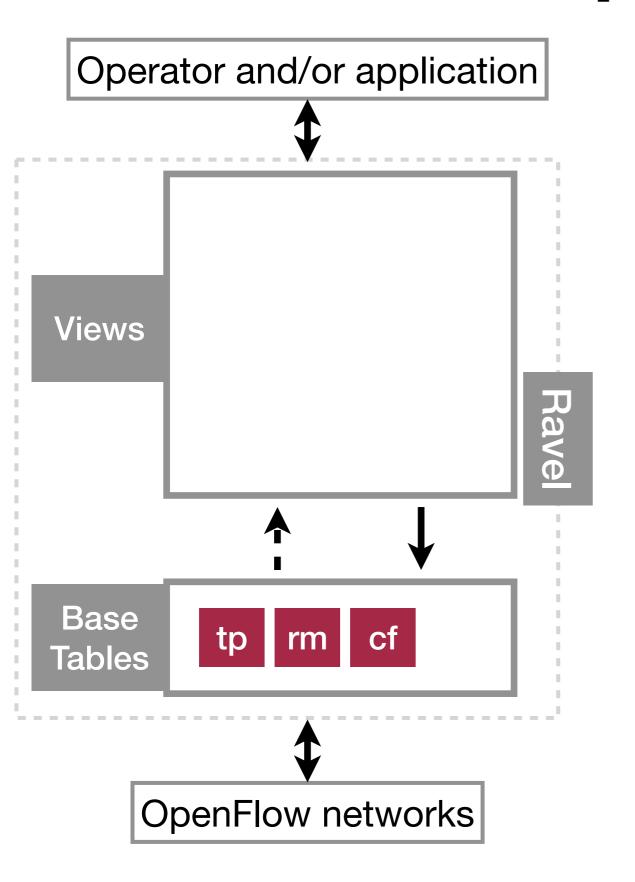

#### Configuration

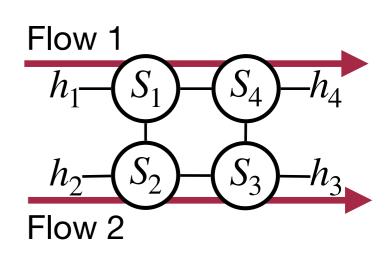

fid	sid	nid
1	S <sub>1</sub>	S <sub>4</sub>
1	S <sub>4</sub>	h <sub>4</sub>

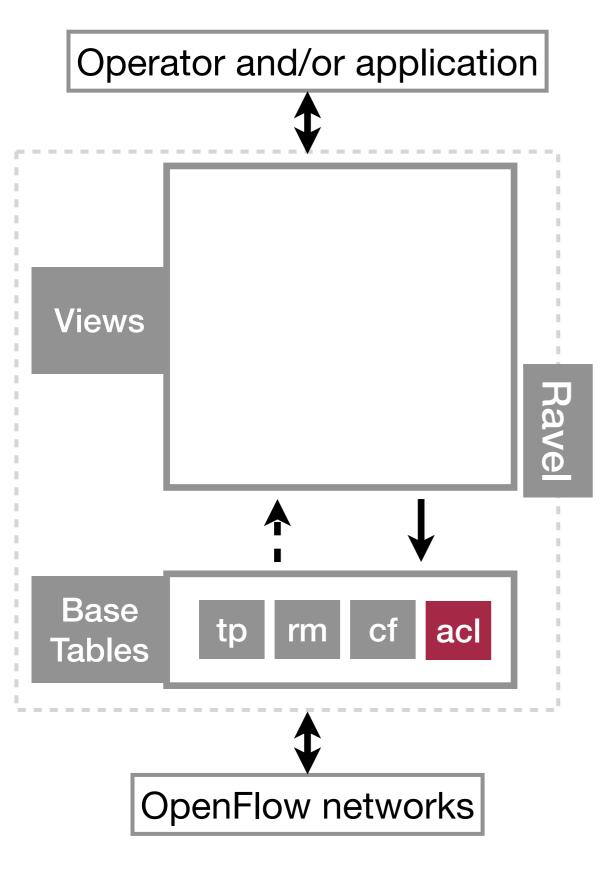

. . .

- -

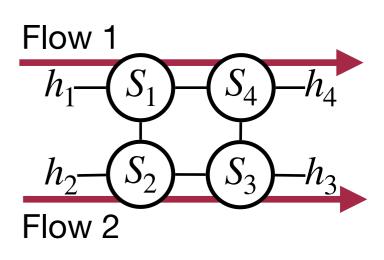

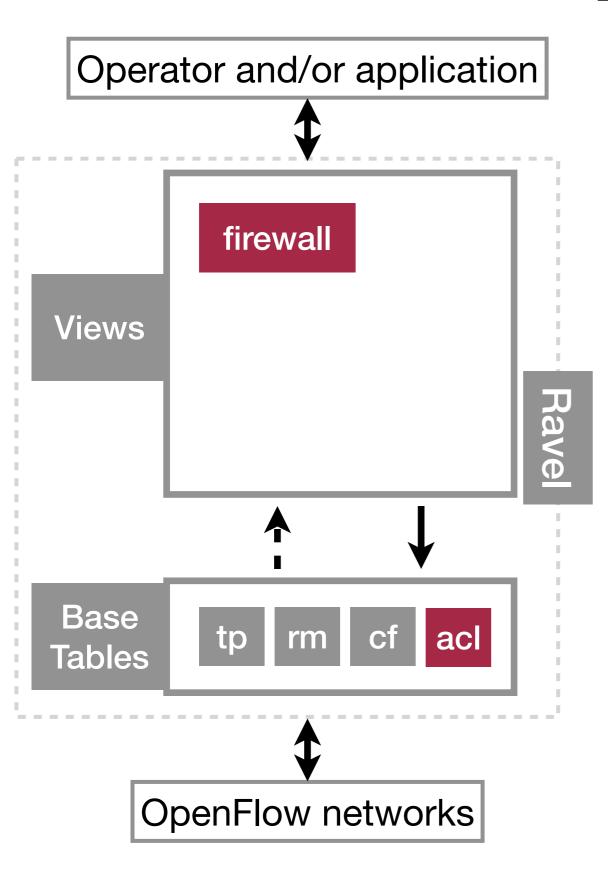

- Firewall view
  - monitoring unsafe flows violating access control(ACL) policy

#### **Access Control**

end1	end2	allow
h <sub>1</sub>	h <sub>4</sub>	0
h <sub>2</sub>	h <sub>3</sub>	1

12

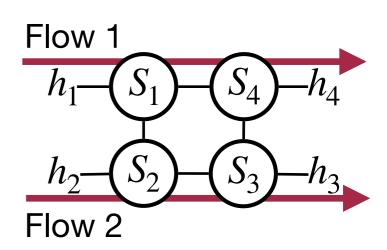

- Firewall view
  - monitoring unsafe flows violating access control(ACL) policy

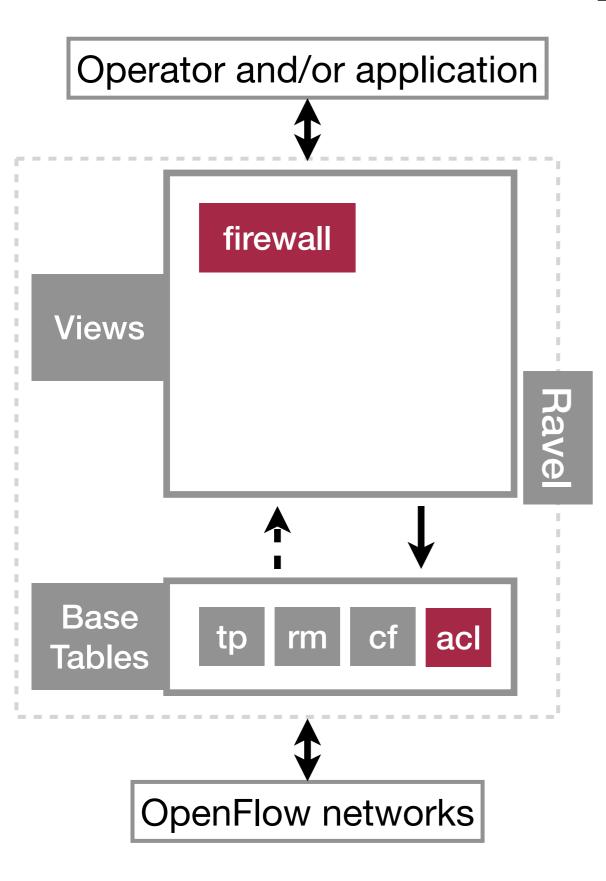

```
CREATE VIEW acl_violation(
   SELECT fid FROM rm
   WHERE (src, dst)
   IN (
       SELECT end1, end2 FROM acl
       WHERE allow = 0
   )
)
```

#### **Access Control**

end1	end2	allow
h <sub>1</sub>	h <sub>4</sub>	0
h <sub>2</sub>	h <sub>3</sub>	1

12

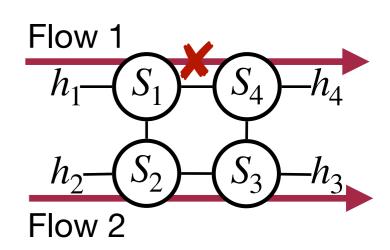

- Firewall view
  - monitoring unsafe flows violating access control(ACL) policy
- Firewall control
  - repairing violation

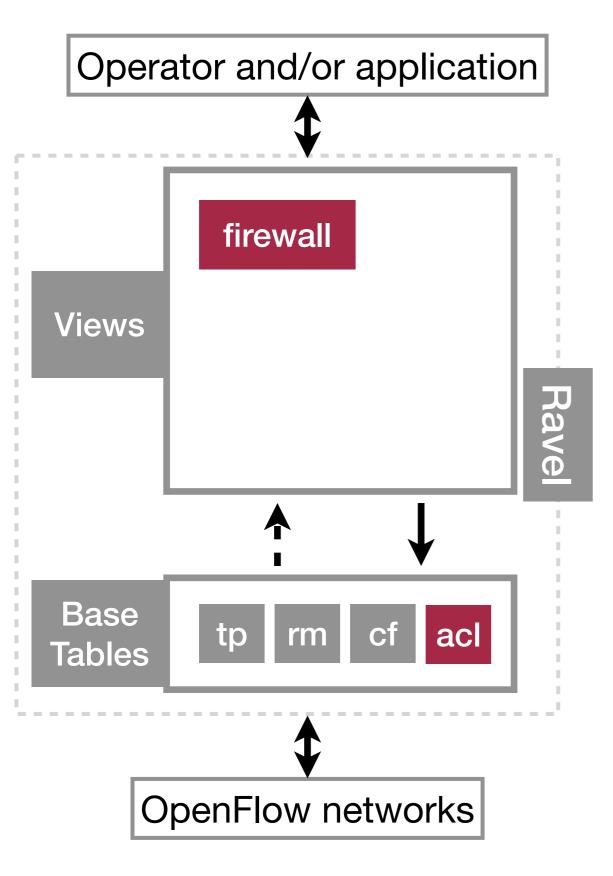

CREATE RULE acl\_repair AS
ON DELETE TO acl\_violation
DO INSTEAD
DELETE FROM rm WHERE fid = OLD.fid

#### **Access Control**

end1	end2	allow
h <sub>1</sub>	h <sub>4</sub>	0
h <sub>2</sub>	h <sub>3</sub>	1

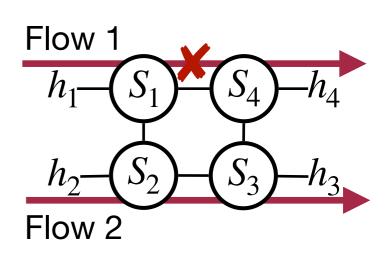

12 •

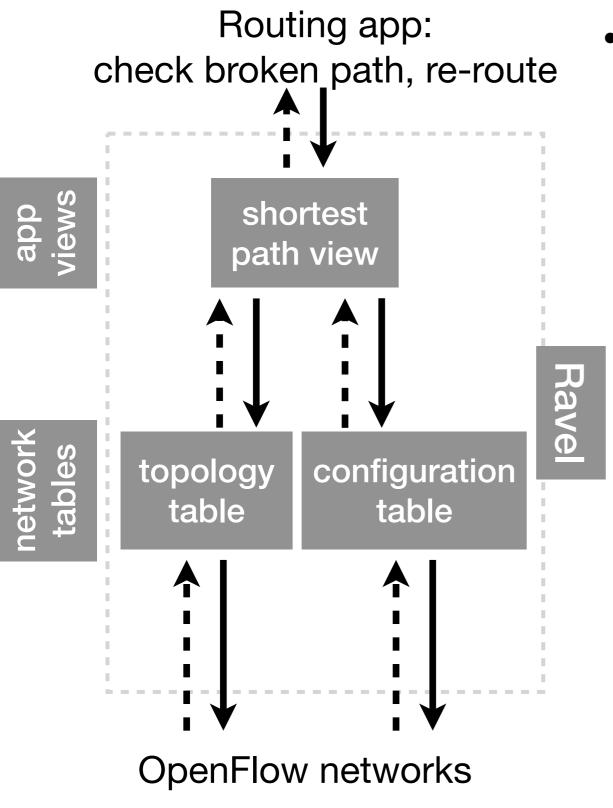

- Firewall view
  - monitoring unsafe flows violating access control(ACL) policy
- Firewall control
  - repairing violation
- More...
  - routing, stateful firewall, load balancer, etc.

#### **Access Control**

end1	end2	allow
h <sub>1</sub>	h <sub>4</sub>	0
h <sub>2</sub>	h <sub>3</sub>	1

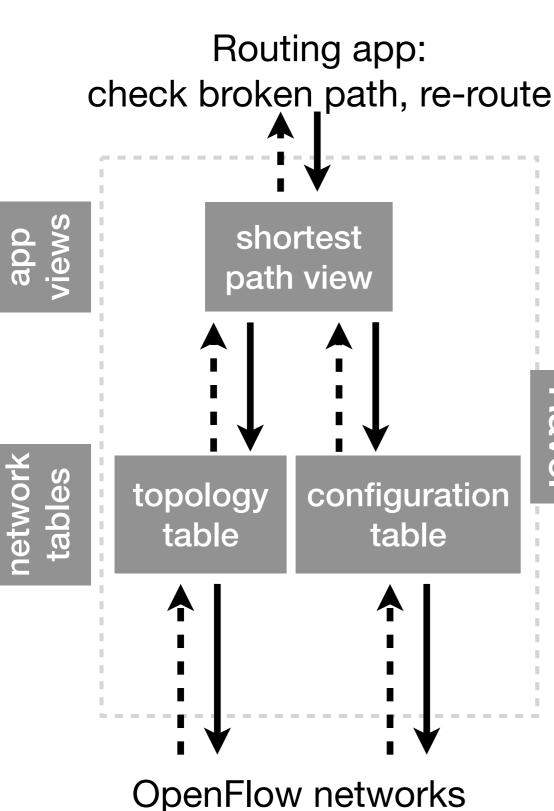

12 •

- Routing
  - a process of path selection in any networks

shortest path between h1 and h4 13

- Routing
  - a process of path selection in any networks

Shortest path view

fic	b	 path

OpenFlow networks

OpenFlow networks

Orchestrated updates: install alternative route that is load-balanced and safe

#### **Ravel Review**

- Ad-hoc programmable abstraction via views
- Orchestration across abstractions via view mechanism
- Orchestration across applications via data mediation
- Network control via SQL

#### Demo

- Ravel website
  - http://ravel-net.org/
  - Download Ravel: <a href="http://ravel-net.org/download">http://ravel-net.org/download</a>
  - Walkthrough video: <a href="http://ravel-net.org/videos/walkthrough.mp4">http://ravel-net.org/videos/walkthrough.mp4</a>
  - Tutorial: <a href="http://ravel-net.org/manual">http://ravel-net.org/manual</a>
- Paper: Ravel: A Database-Defined Network
  - http://anduowang.github.io/docs/sosr16.pdf
- Github
  - https://github.com/ravel-net/ravel

#### **Project Task**

- Download and Play with Ravel
- Create an load balancer application
- Orchestrate load balancer, fw, routing applications with an ascending priority
- You can use any interesting topology with Mininet
- Show your results in a pdf.

# Thanks

**Questions?**
