Affiliation: Temple University, PA; Email: fangping.lan@temple.edu;

LinkedIn: <https://www.linkedin.com/in/fangping-lan-608433196/>

Education

- PhD of Computer Science & Information

School: Temple University

GPA: 3.7

Major: Computer Science & Information

Expected Graduate: May 2026

- Master of Software Engineering

School: Monmouth University

GPA: 4.00

Major: Software Engineering

Graduate: Dec. 2020

- Bachelor of Computer Science and Technology

School: Changshu Institute of Technology

GPA: 3.79

Major: Computer Science and Technology

Graduate: June 2019

Work experience

- **Applied Scientist II**

Apr. 2026 – now

Company: Amazon.com Services LLC, Amazon JFK27, NY

Project Description: Percolate Optimization Data Platform and Analytics mission is to provide timely and reliable high quality data as well as scalable infrastructure, and tooling to enable the Percolate team to quickly and consistently iterate on innovative approaches to improve customer experience by showing the right content, at the right time, and in the right place for that customer. Our self-service analytics solutions drive

Affiliation: Temple University, PA; Email: fangping.lan@temple.edu;

LinkedIn: <https://www.linkedin.com/in/fangping-lan-608433196/>

better customer experiences and incremental business value by delivering performance insights and transparency to all Percolate tenants, including content providers, experience owners, and Percolate internal teams, enabling them to understand content and customer behavior and value on all Percolate powered surfaces.

- **Applied Scientist Intern**

June 2025 – Sept. 2025

Company: Amazon Web Services, Arlington, VA

Project Description: This internship project addresses critical challenges faced by incident responders investigating potential security incidents. Specifically, it targets three key pain points: manual and repetitive search processes across multiple log sources, inefficient search strategies when confronting complex and novel security patterns, and the overwhelming challenge of analyzing large data volumes during time-sensitive investigations. This project will develop an agentic search system that can (1) automate repetitive search tasks across multiple log sources; (2) process natural language queries from security analysts; (3) provide consistent, evidence-based findings.

Skills: LLM, LLM agent, Bedrock API, Strands SDK, DuckDB, Python

- **Research & Teaching Assistant**

Sep. 2021 – May 2026

Company: Temple University

- **Research & Teaching Assistant**

Sep. 2019 – Dec. 2020

Company: Monmouth University

Project experience

- **Constraint-Aware Database Tuning**

Sept. 2025 – Mar. 2026

Project description: Developed a database tuning approach that incorporates explicit knob dependency and constraint rules into Bayesian Optimization-based tuning, reducing reliance on pure trial-and-error. By leveraging documented system knowledge, the method avoids invalid or suboptimal configurations and accelerates convergence to high-performance settings.

Skills: Python, GPT-5, Information Retrieval(IR), Bayesian Optimization, Parameters Tuning, PostgreSQL, Benchbase

GitHub: <https://github.com/lanfangping/CATune>

Demo Video: <https://youtu.be/iG0qZ4XV0vQ>

- **Many-Shot In-Context Learning for Named Entity Recognition**

Sept. 2025 – Mar. 2026

Project description: Investigated many-shot in-context learning for Named Entity Recognition, showing that scaling to hundreds of demonstrations enables LLMs to match or surpass fully supervised BERT models. Further demonstrated that many-shot ICL can serve as an effective data annotation framework, generating high-quality labels that yield significant F1 improvements for low-resource NER when used to fine-tune BERT.

Skills: Fine-tune BERT, LLM, NER, Many-Short In-Context Learning(ICL)

- **LLM is A Database Tuning Expert**

Sept. 2024 – Sept. 2025

Project description: Our hypothesis is that LLMs have good capability to tune database since they studied DB tuning expert's experience stored in text, e.g., manuals, blogs, forums, and LLMs can be an agent to interact with DB to optimize configurations. Thus, LLM is a database tuning expert.

Skills: Python, GPT-4, Llama2, PostgreSQL, MySQL, Benchbase

- **One Document, Many Revisions, Too Many Edit Intention Taxonomies**

Sept. 2023 – Dec. 2024

Project1 - Edit Intention Taxonomies Construction: We studied existing work to explore the intention behind the edits from the original and revised text. We integrated all proposed edit intention taxonomies into a comprehensive edit intention taxonomy that spans multiple application domains and analytical aspects.

Website: <https://sites.google.com/view/dmlab-unit/home>

GitHub: <https://github.com/lanfangping/UniT-EditIntentionTaxonomy>

Project 2 – A Survey of Edit Intentions, Methods, and Applications: Conducted the first survey of text revision research from an edit-intention perspective, unifying datasets, taxonomies, identification methods, and applications. Synthesized the end-to-end revision workflow and highlighted key applications and open research challenges in NLP.

- **Pyotr: Tableau as a network representation for deep analysis**

Jan. 2021 – July 2023

Technique: Python, SQL, PostgreSQL

- **Fauré: A partial approach to network analysis**

September 2021 – Dec. 2021

Project description: Fauré, a preliminary design in which a datalog extension (called fauré-log) for incomplete information is developed to enable loss-less modeling, and combined with static analysis of pure datalog to implement example relative-complete verifiers.

Technique: Python, SQL, PostgreSQL

- **Sarasate: A strong representation system for network policies**

June 2021 – Sept. 2021

Project description: we adopt conditional tables and the usual SQL interface (a relational structured developed for incomplete database) as a means to represent and query sets of network states in exactly the same way as a single definite network snapshot.

Technique: Python, SQL, PostgreSQL

- **Hand Gesture Recognition**

Sept. 2019 – Dec. 2020

Project description: It could recognize the dynamic hand gesture base on a webcam. The hand gesture types include swiping left, swiping right, swiping down, swiping up, pushing hand away, pushing hand in, turning hand clockwise, turn hand counterclockwise, thumb up, thumb down, shaking hand, drumming fingers, stop sign and so on.

Technique: Python, PyTorch, OpenCV, PIL, CUDA, 3D Convolutional Neural Network, Flask, HTML/CSS, JavaScript/jQuery

Training dataset: 20BN-jester Dataset V1

Project demo video: <https://youtu.be/gBE7cOssUbl>, <https://youtu.be/bSkLH-Ng0D8>

- **TimeMe—Time management tool**

Sept. 2019 – May 2020

Project description: A web application is developed to aid users with difficulty to manage their time.

Language: PHP, MySQL, JS

Software Framework: Laravel, vue.js

- **Photovoltaic power generation prediction based on LSTM**

October 2018 – May 2019

Project description: Predicting the short-term or ultra-short-term photovoltaic power based on LSTM. This project has been applied into DAQUAN Research Institute.

Language: Python, HTML, JS

Software Framework: Flask

Algorithm: LSTM-RNN

Training dataset: the dataset of one-year history photovoltaic power and weather condition provided from DAQUAN Research Institute.
